Revised Answers: Web Markup Languages

1. HTML organizes page content with standard elements.
2. XHTML uses HTML elements but applies XML syntax rules.
3. XML represents structured information using custom tags.
4. Browsers can often recover from minor HTML mistakes.
5. XHTML and XML require correctly nested, closed elements.
6. XML describes data and does not define its visual appearance.
7. HTML is suited to websites; XML supports data exchange.
8. XHTML is useful when strict document consistency is needed.

Summary: choose the language according to the document purpose.
